Professional profile:

March 2025 - NOW: High school teaching

I'm teaching a course on the social - cultural impact of AI and the technical aspects of neural networks in high schools.
Part of the PNRR Italian minister of culture project, I've been also teaching stem technologies (such as Arduino, videomaking) to high school's teachers.

July 2024 - February 2025: HABITS Design Studio, Software/hardware prototype development

Main languages used:
C++ (Mainly for microcontrollers)
Python

Other side technologies/skills include:
Linux embedded systems (Raspberry Pis integrations)
Hardware electronics, soldering
Multiple hardware toolboxes and software ones

During my stay at HABITS I'm acquiring the knowledge to bridge technologies, hacking various appliances and use them inside industrial design products prototypes. These bridges involves programming microcontrollers to create custom lighting effects or handling sensors with the various comm protocols such as I2C,I2S,SERIAL,SPI.

2021 - 2024: Freelance Social Media Management/Social Content Creation

_PlayJuggling: (for 4 years) leader in the field of gymnastic/circus equipment.
_YoungDolt: (for 1 years) the youth center in the city of Arese.
Various range of works using social technologies to promote these companies

Università Degli Studi di Milano – University (October 2018 – April 2024) (one year of work in between)

Degree in computer science for the new media communications, with a thesis on a capacitive 2-axis MIDI instrument “**A multi-touch control surface implemented as a MIDI controller**”, despite graduating in New Media Communication, I wanted to make a formal bridge with a passion of mine (music) by writing a thesis in collaboration with the **LIM** (Milano Statal University's Music Informatics Laboratory)

Meanwhile studying for University I've done various freelance work on social media communication and event organizing.

2019 - 2021: Mail Boxes Etcetera , scripting for data entry automation and web technologies

Main languages used:
Python
VueJS / JS
a one year contract (2019) with MBE as an IT Assistant , where I was put to do data entry, bridging datas manually through different platforms. I than started (out of personal desire basically) to automate these processes using Python and APIs to automatically take datas form servers and dbs, rearrange and correct them, and send them back to the other platforms. Through this experience I learnt how much I love to make processes much more efficient. During the year at MBE I became proficient in scripting with Python and powershell bash scripting to automate data copying between different web platforms using different APIs.

MISC:

- HTML / CSS / Tailwind CSS / JQuery / JS: **my website** is made with these technologies
- Version controlling: Git / GitHub
I'm used to work in a team using Git and I use it all the time alone too, in order to manage my projects. **My Github Profile**
- Adobe Suite: Illustrator / Premiere / Photshop / Lightroom
I've been using these programs for a long time and I'm confortable in using them as a semi-professional.
In 2024 I've been professionally deiting one video a month of a **Worldwide Juggling News series on YouTube** and I'm used to do content creation as a freelancer with these softwares.
- Notion / Obsidian: I use these services all the time to manage all my documents and projects' documentations
- Audio-visuals: Ableton Live / TouchDesigner
I've been using these softwares not professionally but for years.

To sum up:

I'm really interested in developing efficient tools to bridge technologies, and I'm trying to stay in different environments to always be inspired.
I have different passions that I try to nurture with work, I love to always understand more about a concept or an idea to continuously expand my knowledge and my skills.
While I'm certain of not being super skillfull in only one thing in particular. I think being

While I'm certain of not being super extraordinary, my education in particular, combining multi-disciplinar enrich the ability to be able to juggle differen tasks and being able to actively jump in different environments.

Education & qualifications

- _Università Degli Studi di Milano – University (October 2018 – April 2024) (one year of work in between)
- _Grammar B2, Listening/comprehension C1 English certificate (CEFR Cambridge)
- _Liceo Scientifico G. Falcone & P. Borsellino – High school (2013-2018)
- _High school diploma- 13th grade
- _Scuola Media Leonardo Da Vinci – Middle school (2011-2013)
- _Middle school diploma – 8th grade

Interests:

I'm interested in tech, jazz/fusion music and performing arts
These spaces allow me to experiment in different directions and relax. While probably these passions won't never become a job, I still try to nurture them and using that to connect with people. It has been many years now that I have been volunteering in a youth center to organize cultural events, and I think volunteering doing a thing I love is such a good "giving back" to che community and myself too.
